

# Quiz

Define the *kernel* of an arrow  $f$ .

# Last Time

The End (for the moment) of the prelude

# This Time

The first movement:  
(Abelian) Groups

# The strategy

- List Axioms which define the category of Abelian groups -  $\text{AbG}$

# The strategy

- List Axioms which define the category of Abelian groups -  $\text{AbG}$
- Prove some classic and some not so classic results using those axioms

# The strategy

- List Axioms which define the category of Abelian groups -  $\text{AbG}$
- Prove some classic and some not so classic results using those axioms
- (Tentatively) Examine the internal structure the objects *must* have if their external structure satisfies the axioms.

# We won't

however, necessarily do this in a strictly linear fashion

# First Axiom

The category  $\text{AbG}$  has an object called the *zero* object which is simultaneously initial and terminal.

# This implies

That for every two objects  $A$  and  $B$  in  $\text{AbG}$ , there exists a unique arrow which we will - usually - denote  $0_{AB}$ .

$$\begin{array}{ccc} A & \xrightarrow{0_{AB}} & B \\ & \searrow A_0 & \nearrow 0_B \\ & 0 & \end{array}$$

where  $A_0$  is the unique arrow from  $A$  to  $0$  (since  $0$  is terminal) and where  $0_B$  is the unique arrow from  $0$  to  $B$ . (since  $0$  is initial)

# The Answer

to the quiz:

# Definition

Let  $f : A \rightarrow B$  be an arrow in  $\text{AbG}$ . The *kernel* of  $f$  is defined to be the equalizer of  $f$  and  $0_{AB}$ .

# We will

for the purpose of greater “diagrammatic simplicity” often draw the equalizer diagram which describes the kernel  $k : K \rightarrow A$  of  $f$  in this way:

# Why

Does this suffice?

# Axiom 2

The *Hom* sets in  $\mathbf{AbG}$  have a particular structure. This structure is familiar.

Let  $A$  and  $B$  and  $C$  be objects in  $\text{AbG}$ . Then,  $\text{Hom}(A, B)$  is equipped with an assignment

$+$  :  $\text{Hom}(A, B) \times \text{Hom}(A, B) \rightarrow \text{Hom}(A, B)$  which satisfies the following for every  $f, g \in \text{Hom}(A, B)$  and  $h \in \text{Hom}(B, C)$ :

•  $f + g = g + f$

Let  $A$  and  $B$  and  $C$  be objects in  $\text{AbG}$ . Then,  $\text{Hom}(A, B)$  is equipped with an assignment

$+$  :  $\text{Hom}(A, B) \times \text{Hom}(A, B) \rightarrow \text{Hom}(A, B)$  which satisfies the following for every  $f, g \in \text{Hom}(A, B)$  and  $h \in \text{Hom}(B, C)$ :

- $f + g = g + f$

- $f + (g + h) = (f + g) + h$

Let  $A$  and  $B$  and  $C$  be objects in  $\text{AbG}$ . Then,  $\text{Hom}(A, B)$  is equipped with an assignment

$+$  :  $\text{Hom}(A, B) \times \text{Hom}(A, B) \rightarrow \text{Hom}(A, B)$  which satisfies the following for every  $f, g \in \text{Hom}(A, B)$  and  $h \in \text{Hom}(B, C)$ :

- $f + g = g + f$
- $f + (g + h) = (f + g) + h$
- $f + 0_{AB} = f$

Let  $A$  and  $B$  and  $C$  be objects in  $\text{AbG}$ . Then,  $\text{Hom}(A, B)$  is equipped with an assignment

$+$  :  $\text{Hom}(A, B) \times \text{Hom}(A, B) \rightarrow \text{Hom}(A, B)$  which satisfies the following for every  $f, g \in \text{Hom}(A, B)$  and  $h \in \text{Hom}(B, C)$ :

- $f + g = g + f$
- $f + (g + h) = (f + g) + h$
- $f + 0_{AB} = f$
- $h \circ (f + g) = h \circ f + h \circ g$

Let  $A$  and  $B$  and  $C$  be objects in  $\text{AbG}$ . Then,  $\text{Hom}(A, B)$  is equipped with an assignment

$+$  :  $\text{Hom}(A, B) \times \text{Hom}(A, B) \rightarrow \text{Hom}(A, B)$  which satisfies the following for every  $f, g \in \text{Hom}(A, B)$  and  $h \in \text{Hom}(B, C)$ :

•  $f + g = g + f$

•  $f + (g + h) = (f + g) + h$

•  $f + 0_{AB} = f$

•  $h \circ (f + g) = h \circ f + h \circ g$

• There exists an element  $\bar{f} \in \text{Hom}(A, B)$  so that  $f + \bar{f} = 0_{AB}$ .
